Meet Samantha: Your Automated, Real-Time EHR Transcriptionist

Samantha automatically documents your patient visits – no clicks required!

There has never been anything like Samantha (**S**emi-**A**utono**M**ous **A**daptive **N**ote **T**ranscription **H**euristic **A**lgorithm)! She automatically identifies what should be entered as structured, discrete data, and what should be entered as narrative text, and puts everything you type or say directly into the EHR, including the required coding. It's that easy.

Samantha's intelligence is derived from NoteSwift's proprietary semantic understanding and patent-pending advanced parsing technologies. She actually learns from each provider, so she is able to improve over time—just like a real transcriptionist!

Samantha will help make money for your practice in 3 ways:

1. Samantha enters billing codes more accurately and intuitively, so your claims are submitted faster, and reimbursement denials, **delays and resubmissions are drastically reduced.**

2. When documentation is entered faster, you have more time to follow up on co-morbidities and increase billing, so **your patients are better managed.**

3. Completing documentation faster means you can **see more patients every day.**

With Samantha, there's no more wading through layers of EHR menus. Her single, simple interface provides a totally seamless experience.

Samantha saves providers an average of 4-8 hours each week in EHR documentation time, giving providers more time to care for patients.

Samantha automatically assigns **the necessary ICD-10, SNOWMED and CPT codes** to help practices save time while increasing reimbursements and reducing costly claim denials.

Samantha Maximizes:

- Productivity & Revenue
- Reimbursements
- Time spent with patients
- Quality of care

Samantha Minimizes:

- Clicks!
- Time spent with EHR
- Transcription/scribe costs
- Reimbursement claim denials & resubmissions

Samantha™

Samantha simplifies and streamlines the EHR note entry process

Samantha does the EHR work for you and lets you work the way you want. Just type or dictate your patient encounter information and Samantha automatically completes:

- History of Present Illness
- Past Medical History
- Review of Symptoms
- Prescriptions

- Reason for Visit / Chief Complaint
- Social History
- Exam
- Plan (including Orders)

- Assessment (with Problem List)
- Current Medications
- Allergies

Samantha is easy to install, learn, and use. Samantha can be installed remotely in less than 15 minutes, and is intuitive and user-friendly. Recommended training consists of two one-hour remote sessions, during which you will learn how to use Samantha within your current processes and workflows.

Samantha is designed to serve providers of all sizes and specialties

System Requirements:
Samantha with Built-In Speech Recognition

- Allscripts Professional EHR versions 15, 16 and 17 supported
- Samantha works in Allscripts Hosted, RDP, Citrix or local environments
- Windows 7, 8, 8.1 and 10 supported
- Minimum computer requirements: Intel® Core™ i3 4110 or higher (or AMD equivalent), 4 GB RAM
- For optimal performance, we recommend Philips SpeechMike 3

System Requirements:
Samantha without Speech Recognition

- Allscripts Professional EHR versions 15, 16 and 17 supported
- Samantha works in Allscripts Hosted, RDP, Citrix or local environments
- Windows 7, 8, 8.1 and 10 supported
- Minimum computer requirements: Intel® Core™ i3 4110 or higher (or AMD equivalent), 4 GB RAM
- Samantha supports Nuance Dragon Medical Practice Edition, Nuance Dragon Medical Network Edition, Nuance Dragon Medical One, M*Modal, and NVoq Sayit

We look forward to introducing you to Samantha!
